

Syncro for Guaranteed RFID Compliance

Indigo Software Ltd will help you solve the immediate challenges of achieving RFID compliance through superior integration and maximum performance.

You're probably feeling the pressure of having to implement an RFID solution that fits in with the major retailer's requirements and timescales. You can choose to throw money at the challenge. You can choose to throw people at the challenge. Alternatively, Indigo is ideally positioned to enable you to address the short-term requirements of compliance fast, and then to leverage them into a long term, competitive advantage.

As a specialist in mission-critical supply chain execution solutions, with over 25 years industry expertise and more than 275 organisations across Europe - from mid-size supply chain organisations to global household brand names - using its solutions, Indigo understands the real-world issues of adopting new technologies, standards and business processes. Indigo offers advanced software development and testing skills; business modelling, simulation and optimisation tools; and workshops for the modelling of new application and integration suites.

Syncro Delivers Compliance

Syncro is ideal for customers who are facing immediate RFID mandates.

Indigo recognises that it takes more than technical knowledge of RFID tags, readers and chips to ensure a successful RFID project. Understanding the requirements of the major retail chains, and fast and efficient deployment is a key factor in the overall success of RFID compliance projects.

Indigo also recognises that it is difficult for customers to manage the introduction of new technologies and processes at a time when their IT personnel are already overstretched with internal business drivers.

Syncro provides customers with everything they need to address immediate mandates and exploit a fast-track implementation of RFID and EPC technologies. Syncro helps customers to develop short-term RFID strategies and create successful deployment initiatives through tailored pilots.

Indigo's team of professionals work with customers to manage the costs and risks typically associated with RFID investments. Customers come to Indigo in the knowledge that we work closely with them to ensure that solutions are implemented efficiently and effectively.

Syncro was created by Indigo during pilot studies with existing customers and offers; low price entry, reduced risk, and continued business success.

Syncro – Integration Across your Existing Systems

Syncro addresses the typical issues of integration associated with RFID deployment.

For those customers who are looking to deploy RFID and EPC technologies within their organisation, or who wish to achieve a wider benefit from RFID usage, Syncro will enable them to

create and manage a targeted roll out of these technologies across disparate sites, with confidence.

To help get started, Syncro includes a Health Check Assessment that enables customers to; gauge how ready their systems and quality of data are for RFID deployment, make better use of their current structures, and create RFID enabled processes.

Syncro enables customers to address the complex challenges of deploying RFID hardware, middleware and software, including the selection of appropriate RFID tags, readers and chips; reader management; data filtering and aggregation; tracking and management of stock; and ensuring high quality data flow between systems and trading partners.

Syncro was created from Indigo's wealth of supply chain management, integration and optimisation knowledge and strength of partnerships developed with leading hardware, software and middleware companies.

Syncro – Delivering RFID Solution with an ROI

Syncro is designed for customers wishing to broaden the scope of their RFID deployment.

Syncro provides all the components and services for customers wishing to deploy enterprise-wide RFID initiatives by helping them to integrate full-scale custom RFID systems and extract untapped value within their company, through the use of RFID and EPC technologies.

Syncro enables organisations to design, build and deploy advanced solutions, based on innovative technologies, which will enable them to exploit the real-time potential of RFID data and improve the operational efficiency of their supply chain.

Syncro is ideal for customers who want to invest in RFID technologies and practices and view it as a longer-term opportunity to achieve competitive supply chain efficiencies.
