

Syncro for guaranteed RFID compliance

- Do you trade with Tesco, Walmart, Marks & Spencer or Sainsbury's?
- Can you comply with their RFID compliance requirements?
- Do you understand how to implement the latest RFID technology?

An efficiently run supply chain and powerful relationships with trading partners are the foundation for growing a business. But in a world where it often seems the major retailers call the shots complying with their requirements can sometimes be overwhelming. Disparate systems prevent you from gaining immediate insight into the movement of inventory through the distribution channels. Large amounts of manual intervention inhibit your flexibility to adapt to fast changing customer requirements.

Achieve Compliance with Indigo

Indigo's RFID solution, Syncro, offers guaranteed compliance to Tesco's RFID requirements, but also to Walmart / ASDA, Marks & Spencer and Sainsbury as their compliance criteria become established.

- Guaranteed RFID Compliance to Tesco, Walmart, Marks & Spencer & Sainsbury
- Full ASN messaging incorporating RFID Data
- Integration to your current ERP
- Pallet configuration for multi-item pallets (as required by Sainsbury)
- Fully functioning picking through RDT or Voice technologies
- Despatch verification saving incorrect shipments
- Full track and trace
- Integration solutions for WMS

Flexible Design

Syncro is designed for the most demanding of supply chain situations and offers a 4 tier product ladder ensuring that product within carton, within case and within pallet can be fully supported – should future compliance requirements change.

Product Functionality

Syncro is designed as a modular solution that guarantees RFID compliance and offers ASN messaging. Additional modules offer:

Achieve Compliance Fast

Indigo has a wealth of experience providing intelligent software solutions to FMCPG companies and will help you address how to: make the transition from proprietary line-of-sight applications to RFID technologies; maximise the benefits of adopting new standards and protocols for tracking goods in the supply chain; achieve benefits from RFID technologies in 'open-loop' systems; make best use of tagging and information management technologies; and increase efficiency, reduce data entry errors and free up staff to perform value added activities.
